

# Indices Product Specification Sheet

## Indices

Indices have the advantage of allowing traders to take a wider view of a basket of stocks rather than a view of one individual stock alone. A stock index is a good indicative measure of market performance. Indices such as the FTSE 100 and DJIA index are baskets of blue chip stocks listed on the exchange and are generally a good measure of the current market sentiment. A change in the performance of any constituent stock in an index is reflected in a change in the overall value of that index.

## Finance Adjustments

All finance adjustments for open positions in cash indices are carried out at or after 17:00 ET. Finance adjustments are not made on open positions on CFD futures markets. As you hold a position overnight, (i.e. After 17:00ET) a finance adjustment is made to your account. This is calculated as follows:

$$f = (s \times p \times r) / d$$

### Where

f = daily financing charge

S = your stake

P = closing price as determined by IC Markets Global

r = relevant overnight LIBOR rate, PLUS 250 basis points for long positions, or MINUS 250 basis points for short positions

d = number of days, i.e. 365 for UK and Australian indices and 360 for all others
